Shoji Glass for Partition

WASHI LAMINATED GLASS/ SHOJI LAMINATED GLASS

WASHI LAMINATED GLASS consists of two or more layers of glass that are bonded together with a layer of washi paper in between. The washi paper provides a unique texture and translucency to the glass, allowing light to filter through in a warm and diffused manner. Washi laminated glass is commonly used in interior design and architecture for applications such as partitions, doors, windows, and skylights. It is also valued for its durability and safety features, as the laminated structure provides increased resistance to impact and breakage.

Washi

01

Glass partition is commonly used in modern office spaces, conference rooms, and residential areas to create a sleek and contemporary look while allowing natural light to flow through.

GLLG-3210

Washi paper is a traditional handmade paper, also known as 'washi', and it is an important part of Japanese culture.

Kiln Casted

GLKG-7102

THE WAVY TEXTURE GLASS can help to obscure or diffuse light, providing privacy and reducing glare. The textured surface of the glass can scatter light in different directions, making it more difficult for people outside to see inside. At the same time, the diffused light can create a softer and more even distribution of light within the room, reducing harsh shadows and glare.

FABRIC LAMINATED

FABRIC are meticulously cleaned, carded, and spun into yarns, which form the foundation of the fabric. This crucial stage lays the groundwork for the subsequent weaving or knitting processes, which ultimately result in the creation of the final product.

https://www.glasslabel.com.hk/feature-wall

Fabric

FABRIC PRODUCTION involves the intricate process of weaving or knitting fibers together to form a structured textile. The initial step in this process is the selection of fibers, which can be either natural, such as cotton, wool, silk, or linen, or synthetic, such as polyester, nylon, or rayon. Once the fibers have been chosen.
